ZEBRA

Take command of the on-demand economy

Upgrade to the MC9300

With the surge of e-commerce, you're juggling more SKUs, more item-level picking and more returns in shorter delivery times. The mobile computers that you relied on yesterday are no match for today's volume and velocity of orders. That's because their outdated green-screens are hard to learn and time-consuming to use. Time to amplify productivity with Zebra's MC9300.

Why Zebra's MC9300 is good for your warehouse business:

3 million workers use the MC9000 Series: The MC9300 is based on the series proven effective for millions of workers. Imagine then what this next evolution can do for your operations.

Boost productivity 10%: When compared to a competitive device, the MC9300 proved formidable. A worker outputs almost an hour more of tasks per day.* Multiply that across your entire staff and you have impressive results.

Speed up training times: Onboard permanent and seasonal workers in weeks, instead of months by leveraging the familiarity of the MC9300's Android™ operating system. With the MC9300's keypad and touch screen, workers can use your existing terminal emulation (TE) apps now and transition to intuitive, on-screen apps in the future.

Solve one of your biggest worries: Ease your transition to Android with Mobility DNA's All-Touch TE. Simply run your existing TE apps right out of the box without having to code your backend systems.

Gain years of OS security support: Peace of mind is yours with LifeGuard™ for Android. It extends the value of your investment by offering you up to 10 years of OS security support for your MC9300.

Pave the way for future advancements: Your MC9300's Qualcomm chipset creates a multi-task platform ideal for data and voice apps, machine learning and advanced Internet of Things applications.

*Performance improvements measured by a third-party testing laboratory
